Victor Kaidan

PRODUCT & DESIGN LEADER

+972 54 242 1127 | victor.kaidan@gmail.com | linkedin | articles & portfolio

SUMMARY

Product and design leader for complex, data-rich systems and AI-powered products, with experience across enterprise SaaS and consumer products. I enable teams to consistently deliver high-impact work, in shorter cycles, through people development, clear strategy, operational standards, and thoughtful use of AI. I combine behavioral psychology, systems thinking, and technical depth to reduce user effort and integrate disparate platform capabilities into cohesive workflows that build user trust.

Most recently, I defined the UX strategy for the transition of a B2B analytics platform toward product-led growth and AI, building the agentic product vision adopted by leadership and moving the team to AI-assisted delivery.

EXPERIENCE

Sisense | B2B, BI & Embedded Analytics; 500+ employees

Product Design Director | 2021 - 2026

Led the product design function across the entire platform, owning UX strategy, budget, and the operating model, and shaped product strategy and roadmap priorities through the Product steering committee. Built and led a multicultural team across several time zones, covering UX/UI, research, and design systems.

- **Product & AI:** Enabled business users to answer their own data questions without waiting on an analyst, directing the design of the AI assistant from concept to release and guiding product managers on features and workflows.
- **Product vision:** Defined the AI-native product vision with agentic capabilities that leadership adopted as the platform's long-term direction, prototyping it in code so the strategy could be explored as a working experience.
- **Growth & customer insight:** Opened a self-serve path to value for new users during the shift to PLG, leading design for the self-service trial and information architecture overhaul. Introduced the behavioral analytics adopted to measure its KPIs and established the research practice, centralizing findings for reuse across teams.
- **Organization & team:** Raised the team's productivity and kept it motivated through a series of restructurings, while rebuilding and consolidating the design function. Grew designers toward broader ownership and cross-functional judgment through sustained coaching, leading to fewer revision cycles and less need for hands-on review.
- **Operating model:** Established the AI-era Product Development Lifecycle adopted as the standing operating model, replacing handoff queues between disciplines with cross-functional production and discipline-owned approvals and decisions.
- **Design & engineering:** Accelerated engineering teams' work by driving the build of a front-end generation framework that composed components and user flows from the design system, with a model keeping output within system patterns.

Product Design Lead | 2020 - 2021

Made the platform's complex analytical workflows usable for non-specialists, leading UX/UI design across multiple product areas and mentoring designers.

- Established a shared design foundation across engineering teams by directing the design system and its component-and-style library.

WalkMe | B2B2C, Digital Adoption Platform; 500+ employees

Senior Product Designer | 2018 - 2020

Owned end-to-end UX/UI design of WalkMe Mobile, enabling onboarding and feature adoption inside customers' apps, then led major improvements to the Core product.

- Cut task completion time by more than half for users with limited technical and design skills, through successive redesigns of the visual editor, establishing its market leadership in flexibility and functionality.

Smartlend | B2C / B2B, Fin-Tech; 20+ employees

Founding Product Designer & Product Manager | 2015 - 2018

Owned the full product lifecycle of the company's B2B and B2C products, partnering with Business Development and Engineering.

- Shipped a POS-terminal and mobile application that users with limited technical experience adopted with minimal retraining.

Toyga | B2C, Fin-Tech; 200+ employees

Design Team Leader, CRO Manager | 2012 - 2015

Led the design team and oversaw localization across tens of languages, including right-to-left.

- Generated 400k+ leads and ~$12M in revenue, roughly 40% of the annual total, through acquisition funnel design, lifting conversion with continuous A/B testing.

SKILLS

Leadership & Strategy: UX & product strategy, roadmap prioritization, product discovery & PRDs, 0-to-1 product development, OKRs, design operations & operating models, team building, hiring & coaching, cross-functional leadership

Domain & Technology: Generative AI in product & process, AI agents & agentic workflows, conversational UX, human-in-the-loop & trust design, product-led growth (PLG), enterprise SaaS, embedded & multi-tenant products, BI & analytics

Systems & Practice: Design systems, tokens & component libraries, information architecture, interaction design, accessibility, internationalization & RTL, design-engineering collaboration, Figma, AI-assisted prototyping (Cursor, Claude Code, Claude Design)

Research & Optimization: User research & usability testing, customer interviews, concept validation, A/B testing & experimentation, behavioral & product analytics, conversion optimization (CRO)

EDUCATION

MSc in Biotechnology, State University of Moldova

Machine Learning, University of Washington (Coursera)

LANGUAGES

English (Full proficiency), Hebrew (Full proficiency), Russian (Native), Romanian (Intermediate)
